A DEFINITION OF THE CATALAN SEQUENCE

Definition

The Catalan sequence is defined by

$$C_n = \frac{1}{n+1} \binom{2n}{n}.$$

Eugène Catalan (1814–1894)

A DEFINITION OF THE CATALAN SEQUENCE

Definition

The Catalan sequence is defined by

$$C_n = \frac{1}{n+1} \binom{2n}{n}.$$

Eugène Catalan (1814–1894)

Philosophical aspects:

- What is the role of a proof?
- What do you (not) like about a certain proof?
- What are the strengths of a certain proof?

Basic properties

Definition

The Catalan sequence is defined by

$$C_n = \frac{1}{n+1} \binom{2n}{n}.$$

Lemma

The following statements hold (for $n \geq 1$):

(i) $C_n = \frac{4n-2}{n+1} C_{n-1},$

(ii) $C_n = \sum_{i=0}^{n-1} C_i C_{n-1-i}.$

Proof by induction and direct computation

$$C_n = \frac{4n-2}{n+1} C_{n-1}$$

Proof.

Induction step:

$$\frac{4n-2}{n+1} C_{n-1}$$

Proof by induction and direct computation

$$C_n = \frac{4n-2}{n+1} C_{n-1}$$

Proof.

Induction step:

$$\frac{4n-2}{n+1} C_{n-1} = \frac{2(2n-1)}{n+1} \cdot \frac{1}{n} \binom{2(n-1)}{n-1}$$

Proof by induction and direct computation

$$C_n = \frac{4n-2}{n+1} C_{n-1}$$

Proof.

Induction step:

$$\frac{4n-2}{n+1} C_{n-1} = \frac{2(2n-1)}{n+1} \cdot \frac{1}{n} \binom{2(n-1)}{n-1} = \frac{2n(2n-1)}{(n+1)n^2} \cdot \frac{(2n-2)!}{(n-1)!(n-1)!}$$

Proof by induction and direct computation

$$C_n = \frac{4n-2}{n+1} C_{n-1}$$

Proof.

Induction step:

$$\frac{4n-2}{n+1} C_{n-1} = \frac{2(2n-1)}{n+1} \cdot \frac{1}{n} \binom{2(n-1)}{n-1} = \frac{2n(2n-1)}{(n+1)n^2} \cdot \frac{(2n-2)!}{(n-1)! \cdot (n-1)!} = C_n$$

□

Proof by hidden idea

$$C_n = \sum_{i=0}^{n-1} C_i C_{n-1-i}$$

Proof.

Define

$$a(n,j) = \frac{2j-n}{2n(n+1)} \binom{2j}{j} \binom{2(n-j)}{(n-j)}.$$

Proof by hidden idea

$$C_n = \sum_{i=0}^{n-1} C_i C_{n-1-i}$$

Proof.

Define

$$a(n, j) = \frac{2j - n}{2n(n+1)} \binom{2j}{j} \binom{2(n-j)}{(n-j)}.$$

Then, a direct computation shows $a(n, i+1) - a(n, i) = C_i \cdot C_{n-1-i}$.

Proof by hidden idea

$$C_n = \sum_{i=0}^{n-1} C_i C_{n-1-i}$$

Proof.

Define

$$a(n, j) = \frac{2j - n}{2n(n+1)} \binom{2j}{j} \binom{2(n-j)}{(n-j)}.$$

Then, a direct computation shows $a(n, i+1) - a(n, i) = C_i \cdot C_{n-1-i}$. Thus,

$$\sum_{i=0}^{n-1} C_i \cdot C_{n-1-i} = \sum_{i=0}^{n-1} (a(n, i+1) - a(n, i)) = a(n, n) - a(n, 0)$$

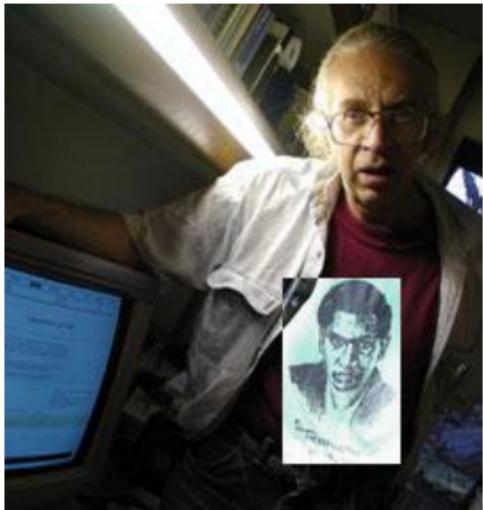

$$= \frac{n}{2n(n+1)} \binom{2n}{n} - \frac{-n}{2n(n+1)} \binom{2n}{n} = C_n.$$

Gosper's algorithm

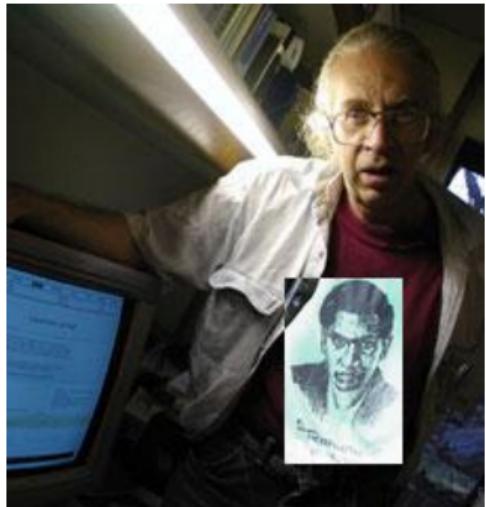

Bill Gosper (1943–)

$$\frac{1}{\pi} = \frac{2\sqrt{2}}{99^2} \cdot \sum_{n=0}^{\infty} \frac{(4n)!}{(n!)^4} \cdot \frac{26390n+1103}{396^{4n}}$$

Gosper's algorithm

Bill Gosper (1943–)

$$\frac{1}{\pi} = \frac{2\sqrt{2}}{99^2} \cdot \sum_{n=0}^{\infty} \frac{(4n)!}{(n!)^4} \cdot \frac{26390n+1103}{396^{4n}}$$

Problem

Given a sequence z_i ,
find a_i with

$$z_i = a_{i+1} - a_i.$$

Then,

$$\sum_{i=0}^{n-1} z_i = a_n - a_0.$$

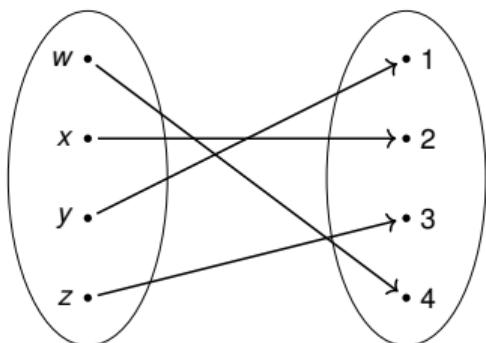

Analysis of elementary algebraic proofs

- Understandable with basic mathematical knowledge
- Very little room for error
- Easy to implement in a computer
- Hard to remember
- Hard to communicate

Bijective proofs

Strategy

To prove $a = b$ for $a, b \in \mathbb{N}$, construct sets A and B with $|A| = a$ and $|B| = b$ and a bijective function $f: A \rightarrow B$.

Definition

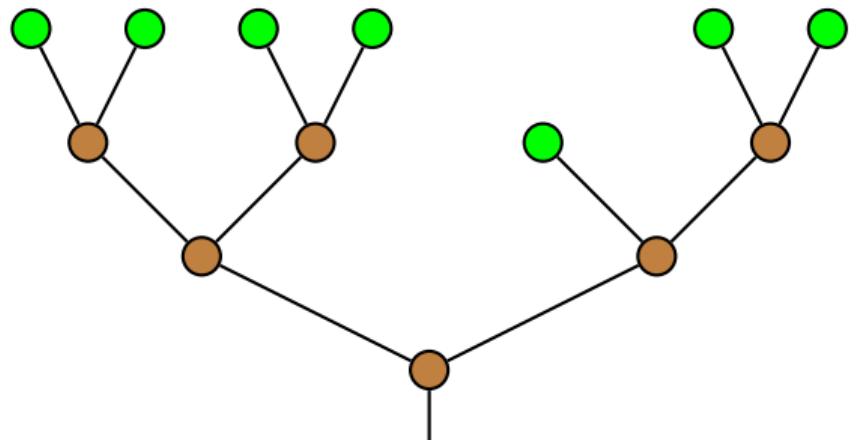

A function $f: A \rightarrow B$ is bijective if there is a function $g: B \rightarrow A$ such that $g(f(a)) = a$ and $f(g(b)) = b$ for all $a \in A$ and $b \in B$.

Binary trees

Definition

A (full) binary tree is either:

- A single vertex.
- A tree whose root node has (exactly) two subtrees each of which is a (full) binary tree

Legend:

- internal
- leaf

Number of binary trees

Lemma

The number of binary trees with n internal vertices is given by C_n .

UPPSALA
UNIVERSITET

Number of binary trees

Lemma

The number of binary trees with n internal vertices is given by C_n .

Proof.

There is $C_0 = 1$ tree with no internal vertex: 

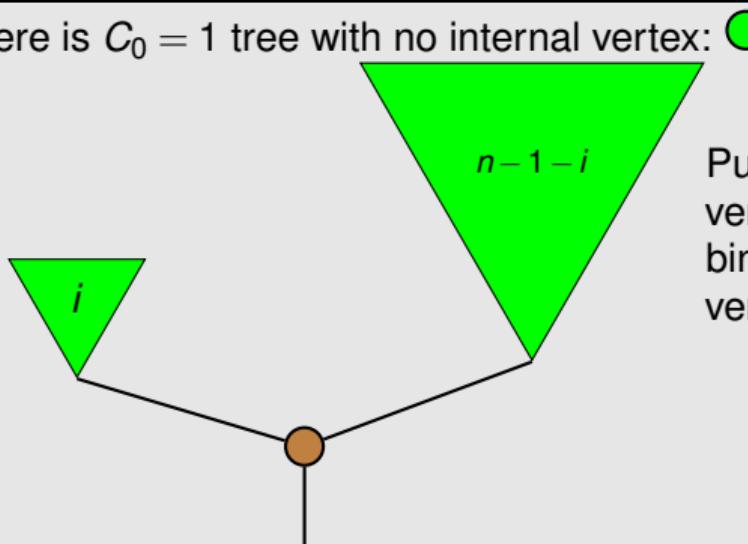

Number of binary trees

Lemma

The number of binary trees with n internal vertices is given by C_n .

Proof.

There is $C_0 = 1$ tree with no internal vertex:

Put a binary with i internal vertices on the left tree, thus a binary tree with $n-1-i$ vertices on the right tree.

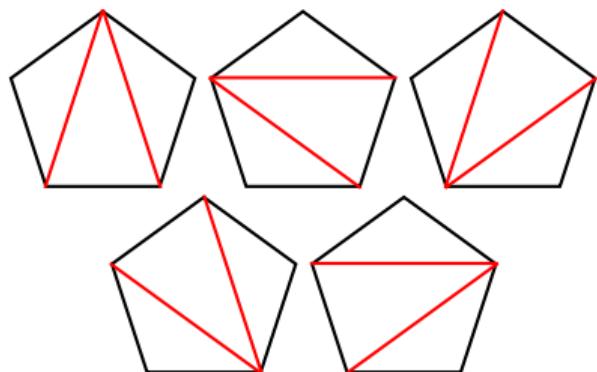

$$\rightsquigarrow C_n = \sum_{i=0}^{n-1} C_i C_{n-1-i} \quad \square$$

Triangulations of convex polygons

Definition

A triangulation of a polygon is a subdivision into triangles.

Leonhard Euler (1707–1783)

Number of triangulations

Lemma

The number of triangulations of a convex $(n+2)$ -gon is C_n .

Fig

$$x = \frac{2 \cdot 6 \cdot 10 \cdot 14 \cdot 18 \cdot 22 \cdots (4n-10)}{2 \cdot 3 \cdot 4 \cdot 5 \cdot 6 \cdot 7 \cdots (n-1)}$$

$1 = \frac{2}{2}, 2 = \frac{2 \cdot 6}{2 \cdot 3}, 5 = \frac{2 \cdot 6 \cdot 10}{2 \cdot 3 \cdot 4}, 14 = \frac{2 \cdot 6 \cdot 10 \cdot 14}{2 \cdot 3 \cdot 4 \cdot 5}, 42 = \frac{2 \cdot 6 \cdot 10 \cdot 14 \cdot 18}{2 \cdot 3 \cdot 4 \cdot 5 \cdot 6}, 132 = \frac{2 \cdot 6 \cdot 10 \cdot 14 \cdot 18 \cdot 22}{2 \cdot 3 \cdot 4 \cdot 5 \cdot 6 \cdot 7}$

Analysis of bijective proofs

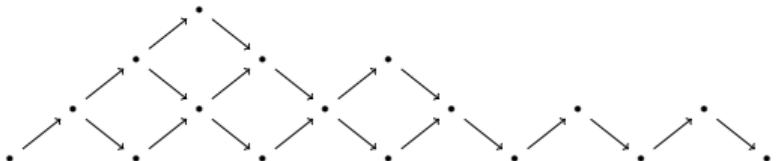

- Much more pleasing to the eye
- Easy to communicate
- Easy to remember
- Requires more preknowledge
- More room for error
- Harder to reduce to the axioms

Outlook: Research perspectives on Catalan numbers

- Nakayama algebras
- Tilting modules
- A_∞ -algebras and super-Catalan numbers

Nakayama algebras

There is a bijection between (admissible) quotients of the ring of upper triangular $(n+1) \times (n+1)$ -matrices and Dyck paths.

Theorem (Chavli–Marczinkik '22)

The number of projective modules of injective dimension one for the Nakayama algebra corresponding to a Dyck path is equal to the number of fixed points of the 321-avoiding permutation corresponding to it under the Billey–Jockusch–Stanley bijection.

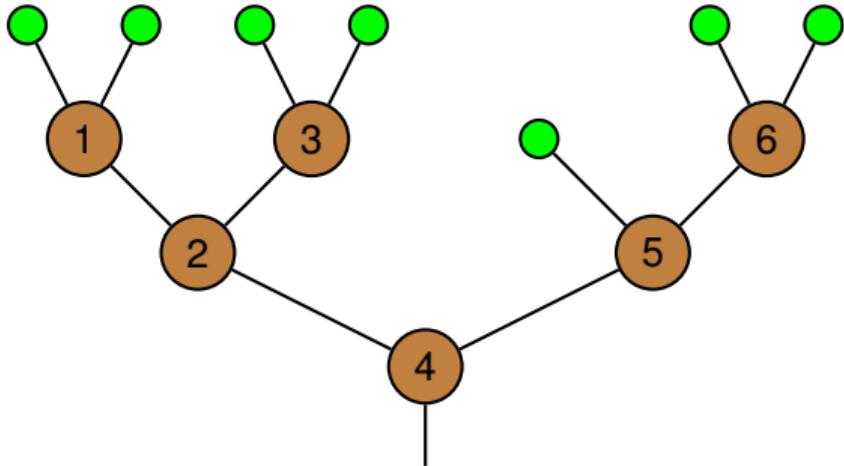

Tilting modules

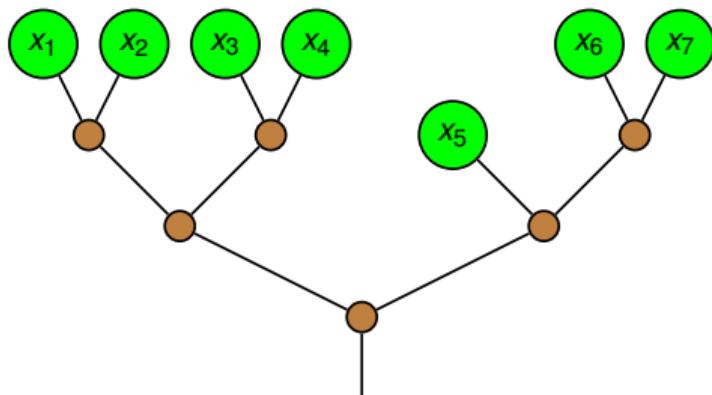

Theorem (Flores, Kimura, Rognerud '20)

There are bijections between:

- (1) *Binary trees with n internal vertices,*
- (2) *Minimal adapted partial orders on $\{1, 2, \dots, n\}$,*
- (3) *Tilting modules for upper triangular $n \times n$ -matrices.*

A_∞ -algebras

Multiplications with several inputs, i.e.
non-binary trees and corresponding
multiplication structures.
⇝ super Catalan numbers
1, 1, 3, 11, 45, 197, ...

Associativity: Result
independent of binary tree.
